TOKEN METRICS

SYMBOL	$GAT
TOTAL SUPPLY	1.000.000.000.000.000
DEV TEAM	0.5% and LOCK 1 YEAR
	(RELEASE 10%/MONTH, STARTING FROM 22/3/2021)
MARKETING	0.5% OF TOTAL SUPPLY
	(WILL BE PUBLIC ON SITE, WILL USE FOR LISTING, AUDIT, COMMERCIALS,…)
BLACK HOLE BURN	49% OF TOTAL SUPPLY
LIQUIDITY POOL	5BNB + 490.000.000.000.000

OVERVIEW

$GAT (Green Apple Token) is an EXPERIMENTAL progressive deflationary DEFI token built to succeed

The whole idea behind GAT is to provide a #SAFE playground for #FRUITLOVERS. GAT seeks to build on the existing models of static reward tokens to hope that will be no DIPs at all.

WHY STATICS?

Static rewards solve a host of problems. The reward amount is #Benefital for all #TRUEHODLERs and #Encouragement for #NEWHODLERs. In theory, with the manual burn function and a depreciating supply, even a small holder at the beginning could potentially walk away with big money at the end of the token's lifespan.

AUTOMATIC LP

Automatic LP is the secret sauce of GAT. Here we have a function that acts as a two-fold beneficial implementation for holders. First, the contract sucks up tokens from sellers and buyers alike, and adds them to the LP creating a solid price floor. Second, the penalty acts as an arbitrage resistant mechanism that secures the volume of GAT as a reward for the holders. In theory, the added LP

creates a stability from the supplied LP by adding the tax to the overall liquidity of the token, thus increasing the tokens overall LP and supporting the price floor of the token. This is different from the burn function of other reflection tokens which is only beneficial in the short term from the granted reduction of supply. As the GAT token LP increases, the price stability mirrors this function with the benefit of a solid price floor and cushion for holders. The goal here is to prevent the larger dips when whales decide to sell their tokens later in the game, which keeps the price from fluctuating as much as if there was no automatic LP function. All of this is an effort to alleviate some of the troubles we have seen with the current DeFi reflection tokens. We are confident that this model and protocol will prevail over the outdated reflection tokens for these reasons.

$GAT is a token with a max circulating supply of 100 Quadrillion. On each transaction, a tax of 3% will be REWARDED to all the HODLERS and others 2% will be SENT TO THE BLACKHOLE (BURNED). As the supply decreases, the value of GAT increases. Without a burning limit, you know what happens next!

GAT ECOSYSTEM

GAT is build on Binance Smart Chain, sooner or later we'll have on Etherium blockchain too.

BURN RATE

Each transaction triggers a burn rate of 2%, which decreases the supply of GAT overtime.

REWARDS

Hodlers will be rewarded with a 3% tax on each transaction to punish #WEAKHANDS. (YOU WONT BE RICH IF YOU CANT HODL – CZ)

FUTURE DEVELOPMENT

GAT will make lots of partnerships overtime. NFTshop, farming, staking, GATswap, and many more (we wont spoil all of it, the best is yet to come).

MOST IMPORTANT PART

Our roadmap could be change through time.

WHY? We work base on #COMMUNITYVOTES and Each people hodl more than 1% of the supply could propose #ULTILITIES and if we get more than 80% of the community's vote. We will make it happen.

Sounds fair? Let us know! WE LOVE YOU, our beloved community!
